

# SCOPE OF HOMOEOPATHY IN FALLOPIAN TUBE BLOCKAGE WITH ADDED HYDRO-TUBATION THERAPY USING HOMEOPATHIC DILUTIONS – A CASE STUDY

**Dr. Anil Kumar Vangani<sup>1</sup>, Dr. Neeraj Gupta<sup>2</sup>**

<sup>1</sup>M.D. (Hom.), Prof. and HOD, Deptt. of Repertory, Sri Ganganagar Homoeopathic Medical College, Hospital and Research Institute, Sri Ganganagar, Rajasthan, India.

<sup>2</sup>M.D. (Hom.), C.G.O., Reader, State Homoeopathic Medical College, Aligarh, U.P., India.

**Abstract:** As general observation tubal factor responsible in infertility is about 37 %. They can get damaged when scars form after pelvic infections, in endometriosis and after pelvic surgery. Homoeopathy has better remedy for the problem as it not only makes fallopian tubes patent but also removes the cause from the organism as a whole. In this study therefore Constitutional remedy was aided with insufflation of dynamised remedy in distilled water by Hydro-tubation therapy and wonderful and rapid results were noted. Details of a case studied under the heading and its results are discussed in the article.

**Key words:** Infertility, Fallopian tubes, Hydro-tubation, Constitutional remedy.

## Introduction:

Fallopian tube blockage has become very common now a days. The tubal factor is responsible for infertility in 21 % (Stallworthy, 1963) to 47% cases (Rubin, 1947) but as general observation tubal factor responsible in infertility is about 37 %. Fallopian tubes carry eggs from ovaries, which produce eggs, to the uterus. They can get damaged when scars form after pelvic infections, in endometriosis and after pelvic surgery. That can prevent sperm from reaching an ovum, resulting in infertility.

Among the factors of infection, there is general bacterial infection as well as some infections due specific pathogens in genitalia entered into the pelvis caused by Chlamydia trachomatis, Ureaplasma urealyticum, Mycoplasma hominis, or protozoon.

The purpose of this study was to explore tubal inflammation, partial and complete block with the psychological consequences for couples, especially for women in infertility. The management of the cases of female infertility, tubal factors esp. partial tubal blockage with inflammatory reaction and thick mucus plugs in fallopian tubes are one of the likely causes to be treated.

## A CASE STUDY

Patient's Name – Mrs. ABC

Age – 36years /F

Religious – Muslim

Husband Name – CDE

Email- [ABCDE@gmail.com](mailto:ABCDE@gmail.com)

Address- HIJK-123 B

SHIPRA RIVERA, Indrapuram, Ghaziabad - 201014

M- 1234567890

(All above personal information are not disclosed here due to medico-legal purposes)

## Chief Complaints:

Right temporal headache with gastric complain

> by vomiting

Cramp legs

> by pressure

Flatulence agg. empty stomach

## Presenting complaints:

Secondary infertility

Left Fallopian tube blocked

M/H: Menarche 15 years /reg/5 days /no pain/no concomitant

Leucorrhoea –yellow thick < before menses

Marriage -32 years, 14 nov 2011

Till now –menses have no change

Sexual desire – good

O/H: induced abortion with medicines on 2013 Sept., as she was diagnosed having blighted ovum

**Patient as a person:**

Tongue – imprints with black dots on margins of tongue

Head – cold to touch

Past history – jaundice

Family history – mother – renal stone

Stool – first hard then loose upto 3 times

Sleep - sound and refreshing

Eating – sudden hunger at 4 am, disturbing sleep

Activity: No physical activity

Thermal – Hot patient +

Perspiration: Sweating +

Childhood history - Not particular, 3 sister 1 brother

**Mental symptoms** – Fear of rejection esp. by husband as if he would leave her

Yielding disposition Want Company,

Sensitive emotional moderate

Doesn't show anger

Quick decision

Small things results in great worry

Anger on contradiction but doesn't like to be consoled

No more ambitious, no guilt /regrets

**PQRS**

Fear of rejection by husband

Sudden hunger at 4 A.M.

Gastric headache esp. right side > by vomiting

Chill more in cervical region neck

**Analysis and Evaluation:**

**Mentals:**

Yielding disposition

Want Company

Quick decision

Doesn't like to be consoled

Fear of rejection esp. by husband as if he would leave her  
– Insecure feeling

Sensitive

Don't show anger – anger suppressed

Anger on contradiction

**Physical generals:**

Sudden hunger at 4 A.M.

Flatulence agg empty stomach

Leucorrhoea –yellow thick < before menses

Stool – first hard then loose upto 3 times

Hot patient

**Particulars:**

Right temporal headache with gastric complaints > by vomiting

Tongue – imprinted with black dots on margins of tongue

**Analysis of Repertorial Result:**

As per repertorial totality the main causative factor of this case i.e, fear of rejection which developed in the mind of the patient since after induced abortion and since then fear occupied in her mind that her husband will reject and leave her and she became intolerant to least contradiction and lost her confidence to reflect her emotions. She begun to suppress even her anger and became so sensitive that she developed a sort of dyspepsia and headache often in left temporal region. So the psoric affection thus repressed again and again resulted in psoro-sycotic manifestations which are better covered here by Nat. mur.

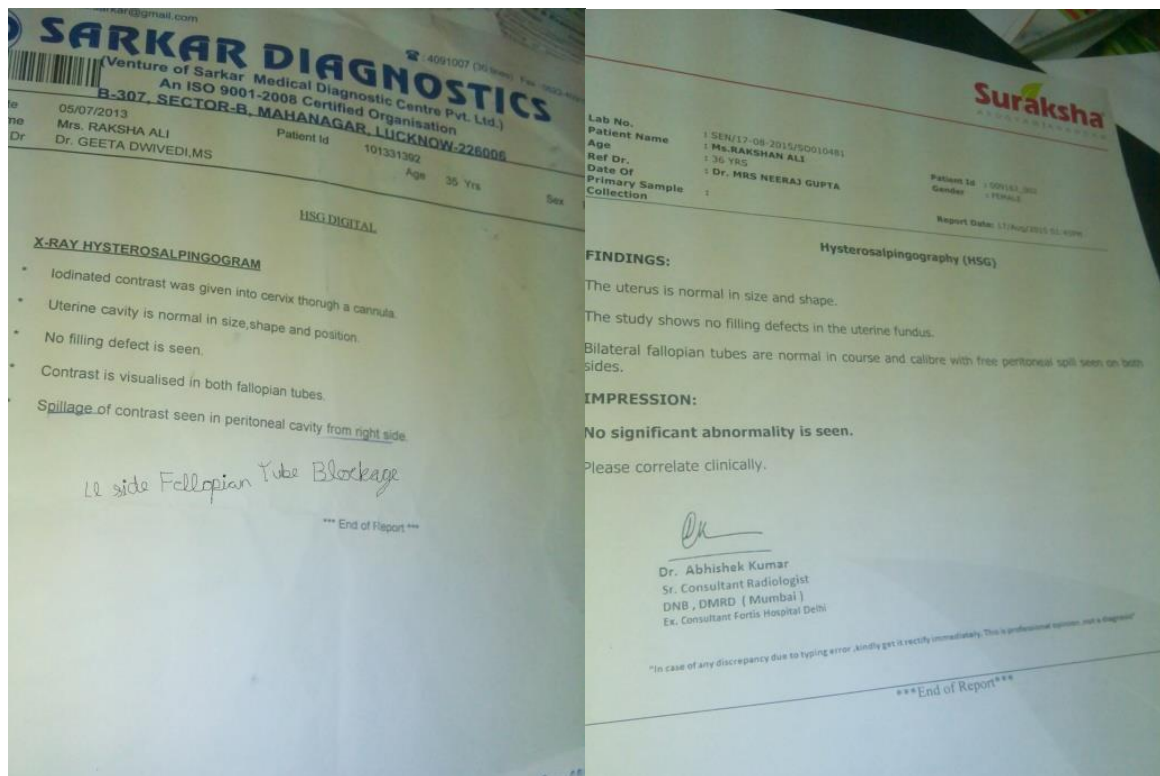

to be given in very high potency to relieve the emotional causative factor and resultant disease thereafter.

Silicea which also came in repertorial result was selected for hydro-tubation therapy as it is indicated for chronic salpingitis and was one of five medicines to be used for Hydro Tubation others being – Amyl nit. 30, Belladonna 30, Calendula 30, Caullophyllum 30, Hydrastis 30; one of them to be selected on visualizing the cervix on Per Speculum examination. On P/S examination of the patient before Hydro-Tubation, condition of cervix was found to be having chronic inflammatory deposits on it with induration and creamy white discharges which was clear cut indication for Silicea.

**Treatment:**

Date	Symptom Change	Treatment
27.5.15	Constitutional medicine of patient selected on the basis of symptom totality to enhance the response of hydrotubation and establish equilibrium of the organism in general	Nat. mur.10m 1Dose HS Placebo 30/3 x 21 days
21.6.15	Menses appeared on 15/6; Hydrotubation performed with 49 ml water and 0.5 ml dilution i.e. 10 drops of dilutions of Silicea 30	Placebo 30/3 x 28 days
25.7.15	Menses occurred on 18.7.15; normal flow, painless Hydrotubation done again, with 49 ml water and 0.5 ml dilution i.e. 10 drops of dilutions of Silicea 30	Placebo 30/3 x 28 days
17.8.15	USG done, both fallopian tubes fully patent	DECLARED CURED
